

I. REMARKS

The foregoing amendments in the specification and claims are of formal nature and do not introduce new matter.

DETAILED ACTION

Priority

Applicants note that the present application has been accorded the priority of application no. PCT/US98/19437, filed on September 17, 1998, as the earliest priority.

Specification

The disclosure was objected to due to the presence of sequences on pages 2, 14, and 16, without sequence identifiers. In addition, Applicants were requested to correct the address of ATCC.

The foregoing amendments in the specification are believed to overcome these objections.

Claim Rejections - 35 USC § 112

1. Claims 39-44, 46, 48, 50, and 51 were rejected under 5 U.S.C. 112, second paragraph as indefinite in their reference to an extracellular domain lacking its associated signal peptide. The foregoing amendments to the claims are believed to overcome this rejection, the withdrawal of which is respectfully requested.

2. Claims 39-43, 50, and 51 were rejected under 35 U.S.C. 112, first paragraph for alleged lack of enablement. However, the Examiner acknowledged enablement "for the form of an isolated polypeptide having at least 80% amino acid sequence identity to the form of the polypeptide that induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction." Since the claims now recite that the claimed polypeptides induce proliferation of stimulated lymphocytes in a mixed

lymphocyte reaction, the Examiner is requested to reconsider and withdraw the present rejection.

3. Claims 39-43, 50, and 51 were rejected under 35 U.S.C. 112, first paragraph for alleged lack of sufficient written description. The Examiner noted that the "claims do now require that the polypeptide possess any particular biological activity, nor any particular conserved structure, or other disclosed distinguishing features. Thus the claims are drawn to a genus of polypeptide that is defined only by sequence identity." Since the claims now recite that the polypeptides claimed induce proliferation of stimulated lymphocytes in a mixed lymphocyte reaction, the claimed genus is characterized by a combination of structural and functional features. This subject matter was described in the specification in such a way that one skilled in the pertinent art would reasonably conclude that applications were in the possession of the invention at the effective filing date of the present application. Accordingly, the withdrawal of the present rejection is respectfully requested.

Allowable Subject Matter

The Examiner noted that claims 45 and 49 were objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form. Since upon entry of the present amendments all claimed are believed to be ready for allowance, it was not necessary to rewrite claims 45 and 49 in independent form.

Applicants believe that all claims pending in this application are in *prima facie* condition for allowance, and an early action to that effect is respectfully solicited.

Attached to the present Amendment and Response is a marked up copy of the amended claims entitled "**Version with markings to show changes made.**"

The Commissioner is authorized to charge any additional fees which may be required, including petition fees and extension of time fees, to Deposit Account No. 08-1641 (Docket No.: 39780-1618.P2C46). A duplicate copy of this paper is enclosed.

Respectfully submitted,

Date: February 26, 2003

Version with markings to show changes made

In the Specification:

On page 2, the paragraph starting at line 37 was deleted, and replaced with the following new paragraph:

--Purification and sequence analysis of the EGF-like domain has revealed the presence of six conserved cysteine residues which cross-bind to create three peptide loops, Savage *et al.*, *J. Biol. Chem.* 248: 7669-7672 (1979). It is now generally known that several other peptides can react with the EGF receptor which share the same generalized motif. Non isolated peptides having this motif include TGF- α , amphiregulin, schwannoma-derived growth factor (SDGF), heparin-binding EGF-like growth factors and certain virally encoded peptides (e.g., Vaccinia virus, Reisner, *Nature* 313: 801-803 (1985), Shope fibroma virus, Chang *et al.*, *Mol Cell Biol.* 7: 535-540 (1987), Molluscum contagiosum, Porter and Archard, *J. Gen. Virol.* 68: 673-682 (1987), and Myxoma virus, Upton *et al.*, *J. Virol.* 61: 1271-1275 (1987), Prigent and Lemoine, *Prog. Growth Factor Res.* 4: 1-24 (1992).--

On page 14, the paragraph starting at line 25 was canceled, and replaced with the following new paragraph:

-- Purification and sequence analysis of the EGF-like domain has revealed the presence of six conserved cysteine residues which cross-bind to create three peptide loops, Savage *CR et al.*, *J. Biol. Chem.* 248: 7669-7672 (1979). It is now generally known that several other peptides can react with the EGF receptor which share the same generalized motif. Non isolated peptides having this motif include TGF-a, amphiregulin, schwannoma-derived growth factor (SDGF), heparin-binding EGF-like growth factors and certain virally encoded peptides (e.g., Vaccinia virus, Reisner AH, *Nature* 313: 801-803 (1985), Shope fibroma virus, Chang W., *et al.*, *Mol Cell Biol.* 7: 535-540 (1987), Molluscum contagiosum, Porter CD & Archard LC, *J. Gen. Virol.* 68: 673-682 (1987),

and Myxoma virus, Upton C *et al.*, *J. Virol.* 61: 1271-1275 (1987). Prigent SA & Lemoine N.R., *Prog. Growth Factor Res.* 4: 1-24 (1992).--

On page 16, the paragraph starting at line 14 was canceled, and replaced with the following new paragraph:

--The proteins of the TGF- β superfamily are disulfide-linked homo- or heterodimers encoded by larger precursor polypeptide chains containing a hydrophobic signal sequence, a long and relatively poorly conserved N-terminal pro region of several hundred amino acids, a cleavage site (usually polybasic), and a shorter and more highly conserved C-terminal region. This C-terminal region corresponds to the processed mature protein and contains approximately 100 amino acids with a characteristic cysteine motif, *i.e.*, the conservation of seven of the nine cysteine residues of TGF- β among all known family members. Although the position of the cleavage site between the mature and pro regions varies among the family members, the C-terminus of all of the proteins is in the identical position, but differing in every case from the TGF- β consensus C-terminus. Sporn and Roberts, 1990, *supra*. --

On page 252, the first paragraph under the heading of "Deposit of Material" was deleted, and replaced with the following new paragraph:

--The following materials have been deposited with the American Type Culture Collection, Manassas, VA, USA (ATCC):

<u>Material</u>	<u>ATCC Dep. No.</u>	<u>Deposit Date</u>
DNA32292-1131	ATCC 209258	September 16, 1997

In the Claims:

Claim 48 was canceled.

Claims 39-44 have been amended as follows:

39. (Once amended) An isolated polypeptide having at least 80% amino acid sequence identity to:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.

40. (Once amended) An isolated polypeptide having at least 85% amino acid sequence identity to:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.

41. (Once amended) An isolated polypeptide having at least 90% amino acid sequence identity to:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.

42. (Once amended) An isolated polypeptide having at least 95% amino acid sequence identity to:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.

43. (Once amended) An isolated polypeptide having at least 99% amino acid sequence identity to:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.

44. (Once amended) An isolated polypeptide comprising:

(a) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

(b) the amino acid sequence of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;

(c) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290);

[(d) the amino acid sequence of the extracellular domain of the polypeptide shown in Figure 102 (SEQ ID NO: 290), lacking its associated signal peptide;] or

[(e)] (d) the amino acid sequence of the polypeptide encoded by the full-length coding sequence of the cDNA deposited under ATCC accession number 209927,

wherein said polypeptide induces proliferation of stimulated lymphocytes in a mixed lymphocyte reaction.
